| Project name | Visualizing housing market trends an analysis of sale prices and features using tableau |
| Maximum marks | 4 marks |

## PROBLEM :

The real estate market is highly dynamic, with property prices influenced by multiple factors such as location, size, number of bedrooms, amenities, and economic conditions. Buyers, sellers, and real estate analysts often face difficulty in understanding price trends and identifying the key features that impact house values.

### SOLUTION FIT:

To solve this problem, this project uses Tableau to build interactive dashboards that visualize housing market trends and feature-based price analysis. The housing market is complex and constantly changing. Property prices vary depending on multiple factors such as location, size, number of bedrooms, amenities, and time period. Buyers, sellers, and real estate analysts

## PURPOSE :

- To analyze housing sale price trends over time.
- To identify the key property features that influence house prices.
- To compare housing prices across different locations or regions.
- To transform raw housing data into clear and meaningful visual insights.

- To build interactive dashboards that support data-driven decision making.
- To help buyers, sellers, and real estate analysts understand market behavior easily.
