SOLUTION ARCHITECTURE

Date	31 January 2026
Team ID	LTVIP2026TMIDS36396
Project name	Visualizing housing market trends an analysis of sale prices and features using tableau
Maximum marks	4 marks

SOLUTION ARCHITECTURE

1. **Data Collection:--**Collect housing market data including sale prices, location, bedrooms, bathrooms, square footage, floors, renovation details, GDP growth, inflation rate, and unemployment rate from reliable sources.
2. **Data Processing:--**Clean the dataset by removing errors, handling missing values, and organizing it into categories such as property features, price trends, economic indicators, and renovation impact.
3. **Database Storage:--**Store the processed data in an SQL database for structured management and easy retrieval.
4. **Analysis:--**Analyze the data to identify patterns such as price variations, feature impact on sale price, market growth trends, and correlations between economic indicators and housing prices.
5. **Dashboard Creation:--**Design interactive charts, graphs, and filters in Tableau to present insights clearly.
6. **Visualization:--**Create dashboards displaying price distribution, sales trends, renovation impact, and feature comparisons.
7. **Comparison:--**Compare properties and regions based on price, features, age, and market performance.
8. **Publishing:--**Publish the interactive dashboard online for stakeholders such as analysts, marketing teams, and executives.
9. **Deployment:--**Deploy the dashboard on a website or presentation platform for easy access and decision-making support.

SOLUTION ARCHITECTURE TEMPLATE:

1. Store the processed data in an SQL database for structured management and easy retrieval.
2. Analysis:--Analyze the data to identify patterns such as price variations, feature impact on sale price, market growth trends, and correlations between economic indicators and housing prices.
3. Dashboard Creation:--Design interactive charts, graphs, and filters in Tableau to present insights clearly.

4. Visualization:--Create dashboards displaying price distribution, sales trends, renovation impact, and feature comparisons.
5. Comparison:--Compare properties and regions based on price, features, age, and market performance.
6. Publishing:--Publish the interactive dashboard online for stakeholders such as analysts, marketing teams, and executives.
7. Deployment:--Deploy the dashboard on a website or presentation platform for easy access and decision-making support.
